

The NASA Solar System Exploration website, <http://solarsystem.nasa.gov>, sponsored by the Science Director for Solar System Exploration, Office of Space Science, NASA, is a gateway to information about our solar system and NASA's missions and research to understand it. The site has been designed for easy navigation and is becoming known as a resource for educators, students, media, and publishers. Major subsections include latest news, newest images, a link to NASA research opportunities in space science, technology, missions, information on solar system bodies, the people who are involved in solar system exploration, and the history of solar system exploration in the space age. There is also a link to the NASA Solar System Exploration Education and Public Outreach Forum. Members of the planetary science community are invited to contribute suggestions, comments, and content to the website, including links to their own institutions and research.
